

Minecraft Java 1.19.2

Hardcore / PermaDeath Difficulty System

Developer-Friendly Project Brief + Visual References

1. Project Overview

I am looking for an experienced Minecraft Java developer to create a custom hardcore/PermaDeath gameplay system for Minecraft Java 1.19.2. The main concept is a progressive 35-day difficulty system where each day introduces new challenges, mob changes, environmental hazards, missions, rewards, penalties, relics, and endgame mechanics.

2. Visual References

The following images are reference material to help communicate the intended concept. They are not necessarily exact final assets unless specifically stated.

Reference A — Custom Relic / Weapon Concept

This image is a visual reference for the type of custom/special relic or weapon concept that may be used in the project. The developer can discuss the most appropriate technical implementation for Minecraft 1.19.2.

Reference B — Inventory Slot / Penalty System

This image illustrates the inventory-slot numbering/penalty concept. The written specification remains the authority for which slots are affected on each day.

3. Configuration System

- Enable/disable individual mechanics where practical.
- Configure damage, effects, duration, radius, probability, cooldowns and timers.
- Configure mob health, strength, speed, equipment and spawn amounts.
- Configure daily difficulty settings, mission rewards and penalties.
- Allow individual penalties to be applied or removed through server moderation commands.

4. 35-Day Difficulty Progression

Day 1: Spiders shoot webs; spawners disable/destroy nearby light sources within 16 blocks.

Day 2: Crops stop naturally growing; zombies receive Resistance I and iron swords.

Day 3: Hunger every 30 minutes; sleeping disabled; foxes can steal a random item/stack and run away.

Day 4: All mobs +20% health; wolves apply Hunger within 16 blocks; spiders/cave spiders receive Resistance II and Strength I.

Day 5: Lightning can strike pumpkin-wearing players; cats apply Darkness within 16 blocks; skeleton bows have Power III and Flame.

Day 6: Permanent storm; rain can cause blindness; stronger Outpost Illagers; Endermen can immobilize looked-at players for 3 seconds; upgraded Endermen; fishing has a 3% chance to spawn an upgraded aquatic mob.

Day 7: Mobs receive +10% Strength; rabbits become Killer Rabbits; witches can use a potion containing negative effects; upgraded Zombie Villagers.

Day 8: Nether opens; Mining Fatigue every 30 minutes; spawners summon 5–10 mobs; Giant Slimes introduced; normal Slimes upgraded.

Day 9: Salmon replaced by upgraded Drowned; raids become harder; major upgrades to Drowned, Evokers, Ravagers, Vindicators, Illager crossbow users and Vexes.

Day 10: Neutral/passive mobs become hostile; targeting range 100 blocks; upgraded Blazes, Piglins and Piglin Brutes.

Day 11: Lightning can strike players carrying a bed; Totem has 10% failure chance; Quantum Creepers; upgraded Wither Skeleton equipment.

Day 12: Weakness every 30 minutes; mobs +30% speed; upgraded Zombies and Skeletons.

Day 13: Squids/Glow Squids become Elder Guardians; Cod become Guardians; Giant Magma Cubes; stronger Magma Cubes; Phantoms apply extreme Levitation nearby.

Day 14: Diamond armor can trigger lightning; natural regeneration disabled; torches damage/burn players within 16 blocks; dangerous Redstone Torch mechanic; harder spawners; upgraded spiders/cave spiders.

Day 15: Axolotls apply Poison II within 16 blocks; cows can explode without destroying blocks.

Day 16: Slowness every 30 minutes; very rapid drowning; Iron Golems become upgraded Vexes.

Day 17: Warden applies extreme Slowness within 20 blocks; zombies can interact with/build/destroy blocks according to restrictions; upgraded Endermen.

Day 18: Lava deals 3× damage and causes Nausea nearby; Poison II every 30 minutes; fire deals 3× damage; upgraded Ghasts.

Day 19: Bats cause Blindness within 16 blocks and receive Strength III/Speed III; Silverfish become invisible Berserk Silverfish.

Day 20: Targeting range 256 blocks; bare-hand interaction causes massive damage; Ender Pearls deal double teleportation damage.

Day 21: Ender Dragon stage with Dragon's Breath flood mechanic, warnings, additional enemies from End Crystals, high health/damage; End opens; Y>150 damage; Giant Zombies; Wither effect every 30 minutes; player health becomes 2 hearts; Endermen can pick up most blocks.

Day 22: Shulker projectiles explode and apply extreme Levitation; Shulkers explode on death without block destruction and leave Dragon's Breath; extremely strong Endermen.

Day 23: Ender Quantum Creepers can teleport and appear in the End; Ghasts become Ender Ghasts with lethal projectiles and Dragon's Breath.

Day 24: Cows replaced by Ravagers; Ravagers can charge through/destroy a 5×5 area and apply Bad Omen V; strong attributes.

Day 25: A Wither Boss can periodically spawn at a player's location.

Day 26: Spiders move extremely quickly through water.

Day 27: Skeletons use Power X bows; arrows can trigger lightning.

Day 28: Endermites become Endermites of Death with approximately 1,000 HP and 500 damage.

Day 29: Spawners increase spawning speed when being mined.

Day 30: Lightning can strike Elytra users.

Day 31: Bedrock and Obsidian apply Wither III when touched.

Day 32: Ender Quantum Creepers can destroy Obsidian and blocks containing water.

Day 33: Phantoms explode when killed.

Day 34: Rain becomes Acid Rain and applies Poison II.

Day 35: Final boss stage: The Core, a command-block-based boss/object inspired by a Wither Storm-style encounter; players mine it to reduce its health and it defends itself using different mechanics.

5. Custom AI

The project includes an optional intelligent targeting mode. Where practical, mobs should be able to detect/target players through walls, while Invisibility should cause mobs to lose the target. AI behavior should be configurable where practical.

6. Relic System

All relics have Curse of Vanishing.

Tier 1

- 🛡️ Ultra Shield — Resistance V, Unbreaking.
- 🍷 Ultra Totem — +5 hearts.
- ⚔️ Dragon Slayer — Sharpness VI diamond sword.
- ⛏️ Mountain Devourer — Efficiency VI diamond pickaxe.
- 🐢 Elder Turtle Helmet — Respiration IV.

Tier 2

- 🚢 Propulsion Trident — Riptide III, Unbreaking, Speed II.
- 🔥 Olympic Torch — Speed VIII, cannot be placed, does not cause torch damage, Fire Resistance.
- 🍀 Lucky Clover — +100 Luck; prevents Totem failure.
- ⚡ Infernal Elytra — increased flight speed, unbreakable, lightning immunity.
- 👁️ Sacred Pearl — unlimited Ender Pearl functionality, teleportation-damage immunity.
- 🍏 Sacred Tree Apple — +10 golden hearts; Resistance X; Fire Resistance; Strength X; Speed III; Night Vision; removes negative effects for 30 minutes.
- ⛏️ World Eater — Fortune V, Efficiency VIII, unbreakable Netherite pickaxe.
- ⚔️ Blade of Olympus — Sharpness VIII unbreakable-style Netherite sword with no attack cooldown.
- ⚡ Poseidon's Trident — unbreakable, Loyalty III, Channeling X, multiple lightning strikes; lightning damage within 10 blocks.

Tier 3

- 🐙 Nautilus Helmet — Water Breathing, Invisibility, Dolphin's Grace, Resistance X.
- 🛡️ Hercules Chestplate — Strength V, Resistance XXX, 100-damage Thorns, unbreakable, advanced chestplate enchantments.
- 🐈 Helmet of Hades — Invisibility, Speed III, Resistance V, +10 hearts, unbreakable, advanced helmet enchantments.

- Aegis — unbreakable shield, +50 Resistance, +10 hearts.
- Hermes Boots — Speed VII, unbreakable, advanced boot enchantments.
- Spartan Greaves — Resistance VIII, +5 hearts, unbreakable.
- Curse Remover — immunity to negative effects; removes inventory penalties; prevents Totem failure; breaks if player uses a Totem or dies.
- Totem of the True God — prevents Totem failure, infinite uses, +10 hearts, Regeneration III; main-hand/hotbar use.
- Onigari-no-Ryuuou — custom Netherite sword/model; no attack cooldown; Resistance XX; Fire Resistance; negative-effect immunity; 1,000 damage; unbreakable.

7. Daily Mission System

Each day has one mission with an objective, reward and inventory-slot penalty. The original specification contains the exact objective/reward/penalty values. The mission system should grant rewards immediately upon completion and apply the appropriate penalty when a mission is missed.

Days 1–6: Find Diamond; kill Zombies; obtain Phantom Membranes; obtain Spider Eyes; kill Cats and Wolves; kill Endermen.

Days 7–12: Kill Zombie Villagers and Witches; kill a Giant Slime; complete a Level 5 Raid; kill Blazes; obtain a Creeper Head; obtain a Rabbit's Foot.

Days 13–18: Obtain Sponges; kill a Giant Magma Cube; obtain an Axolotl in a Bucket; obtain a Conduit; obtain Sculk Catalysts; obtain a Netherite Block.

Days 19–24: Obtain Diamond Blocks; collect the required heads/items; obtain the Giant Zombie special block; obtain Shulker Shells; kill Ender Ghosts; kill Ravagers.

Days 25–30: Obtain Wither Roses; kill Spiders; kill Skeletons; kill Endermites; kill Cave Spiders; kill 100 Endermen.

Days 31–34: Kill Withers; kill Ender Quantum Creepers; kill Phantoms; kill Wardens.

8. Penalties and Administration

- Individual penalties should be applicable and removable.
- Server moderators should have commands to manage penalties.
- Penalties may affect inventory, armor or off-hand positions according to the specification.
- Rewards are granted immediately after mission completion.
- If inventory is full, reward items drop on the ground.
- Mission items remain in the player's inventory after the mission is completed.
- If a mission is not completed by the next reset, its penalty is applied.

9. Development Approach

1. Core configuration and daily progression.
2. Mission/reward/penalty framework.
3. Mob attributes, effects and special behaviors.
4. AI and targeting mechanics.
5. Relic system and special abilities.
6. Ender Dragon and final-boss mechanics.
7. Testing and balancing on Minecraft Java 1.19.2.

10. Developer Note

The complete original specification can be provided as the master reference. This document is a cleaner overview intended to make the project easier to review and estimate. If a mechanic needs a different technical implementation because of Minecraft 1.19.2 limitations, please explain the proposed approach before development.
